

FAQ

The AMA between UniqueVN x #SPRINT Today Will consist of 2 parts:

➡ Part 1: Introduction about yourself and the project

👉 **Q1** : Could you please introduce yourself to the community ?

Answer: Hi its Sprint Master, I am the founder of the Sprint Community. I have been in the crypto space for a while and outside crypto, I have created other companies and solutions which are doing well outside crypto. When I am not managing people or invoices, I work as a software developer and also have experience building games.

👉 **Q2** : Can you briefly introduce the #SPRINT project? What is the purpose of this project?

Answer: The main idea initially was to host multiple pump tokens with less distraction from whales, paper hands, external news (elon musk), and market trends. Everyone will get a fair chance to enter at the beginning and exit at the top as opposed to previous pumps where the main investors already enter before the rest of the people and mostly people lose money at the end.

I wanted a place where all people get a fair chance, and still don't have to worry about different scams going on around the crypto space when looking for the next 10x coin to invest in.

👉 **Q3:** Could you please provide some information about #SPRINT Roadmap?

Answer: Sprint starts by some marketing, after some time, we start the presale. Once the presale is complete, we will launch the sprint to DEX (exchanges). Then we do some sprint related activities (sprint boost, buy back, etc) After this, the sprint ends. Total of 7 Days per sprint period, marketing and others can take up to 3 weeks to complete process.

👉 **Q4** : What makes #SPRINT better than its competitors ?

Answer: We have special purpose tokens, not many people out there have this. We also have all these special activities I will explain soon which competitions don't have. Our coins cannot be affected by elon musk or some other activities. Our community members are involved in all decision making processes.

We have a vision and we have a goal and we believe we can achieve all we planned

👉 **Q5** : What big goal is #SPRINT aiming for and implementing in the next 2, 3 months?

Answer: We plan to have a single sprint that our investors can profit 100x. This is our goal for the coming months. We are working hard towards this, building our community, building the funds as well to ensure smooter sprints as we go.

Future sprints will contain sell limits, auto burn and lots of things to keep the rally going as high as we can.

We have set aside funds in addition to all the marketing to ensure there is enough juice to pump the prices and are looking forward to working with private individuals interested in pumps as well.

So far, the idea is looking good and we have had many people showing massive support.

👉 **Q6** : Can you tell us about your token metrics and what incentives are available to investors when buying #SPRINT tokens

Answer: We have added taxes daily to ensure the ride is as smooth as possible to the top.

Our taxes go as high as 70% on the first day for the first and second sprints at least;

If people buy presale, they get instant 40% profit on first day;

Because of the high taxes (50% to holders, 50% to liquidity pool), you gain a lot of money just holding.

We have a special activity called sprint boost, where we use some part of capital raised as well as reserved funds from previous Sprints LP to ensure the price of token continues to rise.

Since not many people sell, you can gain as much as 20x from a single sprint run if everything is done correctly.

And towards the end of Sprint, we have the last activity called Buy Back. This period we buy sprint tokens with all reserved funds we have back from investors exiting to ensure that price stays as stable as possible.

We are adding more exciting functionalities to each new sprints!

Bonus Question: In what currency will we pay for the purchase first?

Answer: BNB

➡ **Part 2: Telegram direct questions**

Question1: Can you explain how your Tokenomics Distribution is? How many tokens Will be minted ? And How many tokens Will be locked by the team?

Answer: In total, 500,000,000,000,000

5% Dev / Marketing wallet

More than 90% of the token will be offered during presale, the rest which is not bought will be burnt.

As said earlier, everyone has a fair chance to buy and no one person should be a whale too early

Question2: We can see an uncountable amount of Hacking & Leaking News today in this Cryptocurrency Space. How do you ensure that the assets of SPRINT Users are Safe and Secure?

Answer: We are using already tested, trusted, updated daily chain

We will be using the binance chain for all our tokens bep20.

This means that if anything goes wrong we can fix it better and faster.

We are constantly updating the code that we use for generating different sprint tokens, that means you don't have to worry as any issue found will be fixed before the next sprint.

Since our sprints are short, there is not enough room for someone to cause so much damage per sprint.

Question3: Launching projects in a bull run is obviously much more profitable than during the bear cycle. In a bear run where most of the projects fail and sometimes go into oblivion, how will Chronicle stand the test of times? What strategies do the project employ to mitigate possible losses?

Answer: Our token does not pay attention to what is happening outside our community and that's the one reason why we stand out.

Since each token launches and runs for a short period, our investors will not suddenly lose money if bitcoin starts to drop or Elon Musk tweets.

In a bear market, we start a sprint, investors contribute, we pump it, investors exist and we buy back.

The same process applies for the bull market and even if a chicken market shows up, we are up for it.

Question4: Almost 80% of investors have just focused on the price of a token in the short term instead of understanding the real value of the project. Can you tell us the motivations and benefits for investors to hold your token in the long term????

Answer: Our token is not for the long term.

Our community is long term with many short term tokens.

We know we can make profit for each sprint token we make and I think that's the biggest plus for investors.

We imagine that our investors are out there looking for the next 10x coin. With us, they don't have to do this anymore.

Just join the next sprint and grow your investment easily.

No honeypots, no rugpulls, no whales.

Question5: The token lasts only for 7 days so what will be after 7 days? Should we still be able to Buy/Sell Sprint? Or will liquidity be removed?

Answer: We encourage all investors to exit before day 7;

If you still feel like you want to hold some part of sprint previous tokens, you will still be able to buy and sell them for a limited period as we will provide additional liquidity with one of our partner long term coins.
