AMA session between CRYPTO STORM and the SPIRIT TOKEN

Our AMA will consist of 3 sessions.

Session 1

Q1. Could you briefly introduce yourself as well as your project?
Answer: Hi everyone, I am Sprint Master.
Founder of the Sprint Community. I have been in the crypto space for a while and outside crypto, I have created other companies and solutions which are doing well outside crypto. When I am not managing people or invoices, I work as a software developer.
The main idea for the sprint project is to host multiple pump tokens with less distraction from whales, paper hands, external news (elon musk), and market trends.
Everyone will get a fair chance to enter at the beginning and exit at the top as opposed to previous pumps where the main investors already enter before the rest of the people and mostly people lose money at the end.
I wanted a place where all people get a fair chance, and still don't have to worry about different scams going on around the crypto space when looking for the next 10x coin to invest in.

Q2. What makes the SPRINT project stand out more than the projects in the same direction at the moment?
Answer: We have special purpose tokens, not many people have this. We also target short term investors. Not many people have such a target.
We have these special activities during the lifespan of each token we launch, competitions don't have this.
Our coins cannot be affected by media and news or some other activities.
In addition, Our community members are involved in all decision making processes.

Q3. What are the memorable milestones of SPRINT in the research and development process?
Answer: We are able to create a special purpose contract / token on the bsc network that allows the kind of tokenomics needed for our kind of project. We continue to work on various ideas to improve the token and are making headway.
We have the first milestone coming up with successfully launching one of the SPRINTS. We are looking forward to this as the last one failed since we didn't raise enough capital, we are hoping to gain more trust from investors and successfully meet the new launch

Q4. What does SPRINT plan to do to attract more users in the upcoming time?
Answer: We have exciting tokenomics and in the coming weeks, we will have proof of a successful first sprint. We plan to keep all our sprint runs successful and profitable so this we believe attracts investors.
We also have a lot of marketing in place and competitions as well as rewards for active investors.
We believe different activities combined can help us attract investors and we continue to research to reach out to more people

Session 2

Great, let's come right up to session 2

Q1. What makes you feel confident about the survival & sustainable success of Your project in the near future?While you build your project, do you take into account community feedback and demands?
Answer: The way our project is setup allows us to stand the test of time. This means regardless of the season, Bull or bear market, we will always have successful sprints and this alone gives a lot of confidence to our team and also our investors.

Q2. Southeast Asia is a very vibrant market and many projects developed here. So with your project, what do you think about Southeast Asia and do you have any plans to develop here?
Answer: We are aware of the important role the asian market plays in technology development and we are following closely. While we don't have many products to work on using Asian workforce, we are working with partners in Asia to expose our product to the people there.

Q3. How do you plan to spread awareness about your project in different countries where English is not spoken well? Do you have local communities for them to let them better understand your project?
Answer: We are slowly onboarding team members from different parts of the world as well as investors and advisers.
We believe in diversity and the power of diversity and through this we can reach out to non english speakers.
In future, we will have different groups and ecosystems to better manage them and we are watching closely our non english speaking investors as they join us.

Q4. As an investor, safety is always one of the biggest concerns. What kind of security protection do you provide for the SPRINT platform?How to ensure the safety of customer assets? From
Answer: From our side we maintain a very slim wallet for marketing and development, less than 8% of total supply so no dump from us, our tokenomics secure our investors from whales and bots as well. Our liquidity is also locked with dxsale during the duration of the sprint.
In addition, We are using an already tested, trusted, and daily updated chain (binance chain) for all our tokens bep20.
This means that if anything goes wrong we can fix it better and faster.
We are constantly updating the code that we use for generating different sprint tokens, that means you don't have to worry as any issue found will be fixed before the next sprint.
Since our sprints are short, there is not enough room for someone to cause so much damage \per sprint.

Q5. Many new projects made a good impression at first but were suddenly abandoned. My question is, how will you manage the project and token to gain a place in the market and become the best token in the blockchain world?

Answer: We target short term investors, this means our tokens are not for the long term. We know investors want to invest quickly and move to the next step and that's why we have made multiple short term tokens to keep them engaged

Our community is long term with many short term tokens. We know we can make profit for each sprint token we make and I think that's the biggest plus for investors to stay with us than go outside to find the next 10x token to buy and maybe fall into rug pull in the process.

We imagine that our investors are out there looking for the next big coin and with us, they don't have to do this anymore.

Just join the next sprint and grow your investment everytime

Session 3

Q1. Can you share your fundraising situation and how your private and public offering tokens are distributed? And what are the plans for the next IEO? What should we prepare if we want to participate?

Answer: Sprint tokens will be launched on secure platform DxSale.

Most of the sprints will be offered through presale.

You can join the @sprinttokencommunity to get info about the latest sprints as well as the respective presale links.

Q2. Only getting users, holders etc is not everything. In my opinion, a project needs to deal with solving a real world issue or problem. What is the problem that your project primarily focuses on?

Answer: The big problem we are trying to solve is investors getting scammed almost every minute because they are trying to double their investments .

Some of them are just looking for a safe place to grow their funds but sadly, the crypto space is full of honeypots, rug pulls and the like.

Our main job is to build a community that uses our tokens for safe, problem free investment's.

Investors are able to grow their funds without the fear of scammers or fake tokens which die after a couple of weeks.

Q3. Many project rug pulled and exit scams recently. Why should investors trust your project not to do the same?

Answer: We have identified most of the ways people are getting scammed today

- honey pots, Liquidity pull and token dump

We fully comply with those three items and our team cannot dump tokens or pull liquidity on investors.

In future we will also renounce the contract as well so there will be no way for investors to lose funds from our side.

Q4. Can you explain how your Tokenomics Distribution is? How many tokens Will be minted ? And How many tokens Will be locked by the team?

Answer: In total, 500,000,000,000,000

5% Dev / Marketing wallet.

More than 90% of the token will be offered during presale, the rest which is not bought will be burnt.

Everyone will have a fair chance to buy and we will have less whales because of the limit on max buy in.

We have added taxes daily to ensure the ride is as smooth as possible to the top.

Our taxes go as high as 70% on the first day for the first and second sprints at least;

If people buy presale, they get instant 40% profit on first day;

Because of the high taxes (50% to holders, 50% to liquidity pool), you gain a lot of money just holding.

We have a special activity called sprint boost, where we use some part of capital raised as well as reserved funds from previous Sprints LP to ensure the price of token continues to rise.

Since not many people sell, you can gain as much as 20x from a single sprint run if everything is done correctly. And towards the end of Sprint, we have the last activity called Buy Back. This period we buy sprint tokens with all reserved funds we have back from investors exiting to ensure that price stays as stable as possible.

We are adding more exciting functionalities to each new sprints!

Q5. Could you please provide some info about your Roadmap and how the Market is progressing so far?

Answer: We have been doing quite a lot of marketing on youtube, twitter, telegram groups, poocoin ads and the likes.

We plan to add tik tok and facebook in coming weeks to further strengthen our marketing.

For now, our focus is on launching the first sprint, after this, we will look into improving our contract and launching other new sprints.
